

Formative 3 Submission

HTML & CSS Styled Webpage

1. Design Explanation

CSS Application: I used many CSS rules across element selectors (header, main, ul), classes (.para-one, .hero), pseudo-elements (ul li::marker), and pseudo-classes (:hover, :first-child). Different fonts and colors on the two paragraphs show how typography rules work. The list uses line-height, padding, and hover feedback. The image uses border, margin auto, display block, and a hover transform. A gradient background and box-shadow add depth while still using correct syntax.

Layout and Structure: Flexbox on the body creates a column layout so the footer stays at the bottom. The main area uses CSS Grid with two sections—content and media—so text and image are organized side by side on wider screens and stacked on small screens. Margins center the card, padding adds space inside sections, and max-width keeps lines readable. This structure is clear and aligned.

Importance of Choices: Separating HTML and CSS makes the page easier to update. Contrasting header and footer backgrounds define page sections. Spacing rules improve readability. Grid and flexbox reduce messy positioning and are standard layout tools taught in class.

Submission: This PDF includes formatted HTML, CSS, a screenshot, and this explanation. Files submitted are formative3.html, style.css, and formative3_submission.pdf as required.

Formative 3 — CSS Styling & Layout

Styling a Webpage

CSS lets you change how HTML looks. You can set fonts, colors, spacing, and layout without changing the structure of the page.

This page uses a linked **style.css** file. The header, paragraphs, list, image, and footer are all styled with CSS rules that match the assignment requirements.

What This Page Includes

- Header with background color
- Two paragraphs with different fonts and colors
- Styled list with custom spacing
- Image with border, margin, and alignment
- Footer with smaller text and background color
